MANAGEMENT REPORT

SIGNIFICANT FACTS AND EVENTS

Memorandum of Understanding signed on establishing the Energy Infrastructure Operators' Cybersecurity Centre

Aiming to strengthen the cybersecurity of the Latvian energy infrastructure, the operator of the Latvian electricity transmission grid AS "Augstsprieguma tīkls" (hereinafter "AST"), the unified natural gas transmission and storage operator AS "Conexus Baltic Grid" (hereinafter "Conexus") and the Information Technology Incident Response Institution CERT.LV signed a Memorandum of Understanding on establishing and operating the Energy Infrastructure Operators' Cybersecurity Centre, thereby also expanding mutual cooperation between all the institutions. The establishment of the Energy Infrastructure Operators' Cybersecurity Centre is the first step towards building cybersecurity capacities specifically targeted at the energy sector. This is important given the increasing number of cybersecurity incidents across the country, especially after the Russian invasion of Ukraine.

Development plan for the electricity transmission system approved for a decade

The 10-year development plan of AST, approved by the Public Utilities Commission (PUC) in October 2022, provides for the continuation of efforts to enhance the reliability of the electricity supply and transmission system, including the introduction of digital solutions to prepare the transmission network for synchronisation with continental European networks, as well as creating the conditions for the injection of a large amount of electricity from renewable sources into the network. In the period until 2033, AST has budgeted capital expenditure of EUR 500.5 million, of which investments amounting to EUR 210.5 million will be 75% co-financed by European Union funds. The co-financing by the European Union will significantly reduce the impact of the contemplated investments on the electricity transmission tariff.

Three synchronous compensators are to be installed in Latvia for synchronisation with the European Transmission Network

After the synchronisation of the Baltic countries' transmission networks with the European Network, each country will have to adjust the frequency of the network, while also ensuring the level of system inertia necessary for system stability. To ensure the necessary inertia in the energy network, three synchronous compensators will be installed in Latvia. In October 2022, AST signed a contract for the supply and installation of three synchronous compensators. The implementation of the synchronous compensator projects will be co-financed by the Connecting Europe Facility (CEF), one of the European Union's main financial instruments in the energy sector, established to promote growth, jobs, and competitiveness through targeted investments in infrastructure at the European level. 75% of the eligible costs of the synchronous compensator projects are to be covered by CEF co-financing.

Credit ratings of S&P Global Ratings AS "Augstsprieguma tīkls" and "Conexus Baltic Grid" remain high

In December 2022, S&P Global Ratings, which had reviewed Latvia's creditworthiness and set its future outlook to negative, announced that Latvian transmission system operators would not have their credit ratings changed and that they will remain high - the credit rating of AS "Augstsprieguma tīkls" (AST) will remain at the A- level with a stable outlook, while the credit rating of AS "Conexus Baltic Grid", a subsidiary of AST, will remain at the BBB+ level with a stable outlook.

AN OUTLINE ABOUT THE GROUP

The Augstsprieguma Tīkls Group (hereinafter also referred to as “the Group”) is one of the largest energy supply companies in the Baltics. The Group’s core business is the provision of electricity transmission system operator functions, efficient management of energy supply system assets, natural gas transmission and storage.

At 31 December 2022, the Augstsprieguma tīkls Group consisted of a group of commercial companies in which the parent company AS “Augstsprieguma tīkls” (hereinafter also “AST” or “the Parent Company”) has a decisive influence and which includes the subsidiary AS “Conexus Baltic Grid” (hereinafter also “Conexus” or the “Subsidiary”). The Group operates geographically in the territory of Latvia. See Note 8 for information on the shareholding in the Subsidiary and its location. AS “Augstsprieguma tīkls” together with the electricity transmission system operators of Estonia and Lithuania established the Regional Coordination Centre for Electricity Systems of the Baltic countries - “Baltic RCC” OÜ. See the information on the shareholdings in the associated company and its location in Note 8.

All shares of AS “Augstsprieguma tīkls” are owned by the State and are held by the Ministry of Finance of the Republic of Latvia.

The Group’s structure is divided into three activity segments - electricity transmission, natural gas transmission and natural gas storage. The division is based on the Group’s internal organizational structure, which forms the basis for monitoring and managing the performance of the segments. For more information on the operating segments and the Parent Company, please refer to the section “An outline of the operating environment and financial performance”.

The overall **strategic goal** of AS “Augstsprieguma tīkls” is to ensure the security of Latvia’s energy supply, provide a continuous, high quality and accessible energy transmission service, and implement the sustainable management of the country’s strategic energy supply assets and promote their integration into the European Union’s internal energy market.

Our **mission** is to ensure a continuous, secure, and sustainably efficient energy supply throughout Latvia.

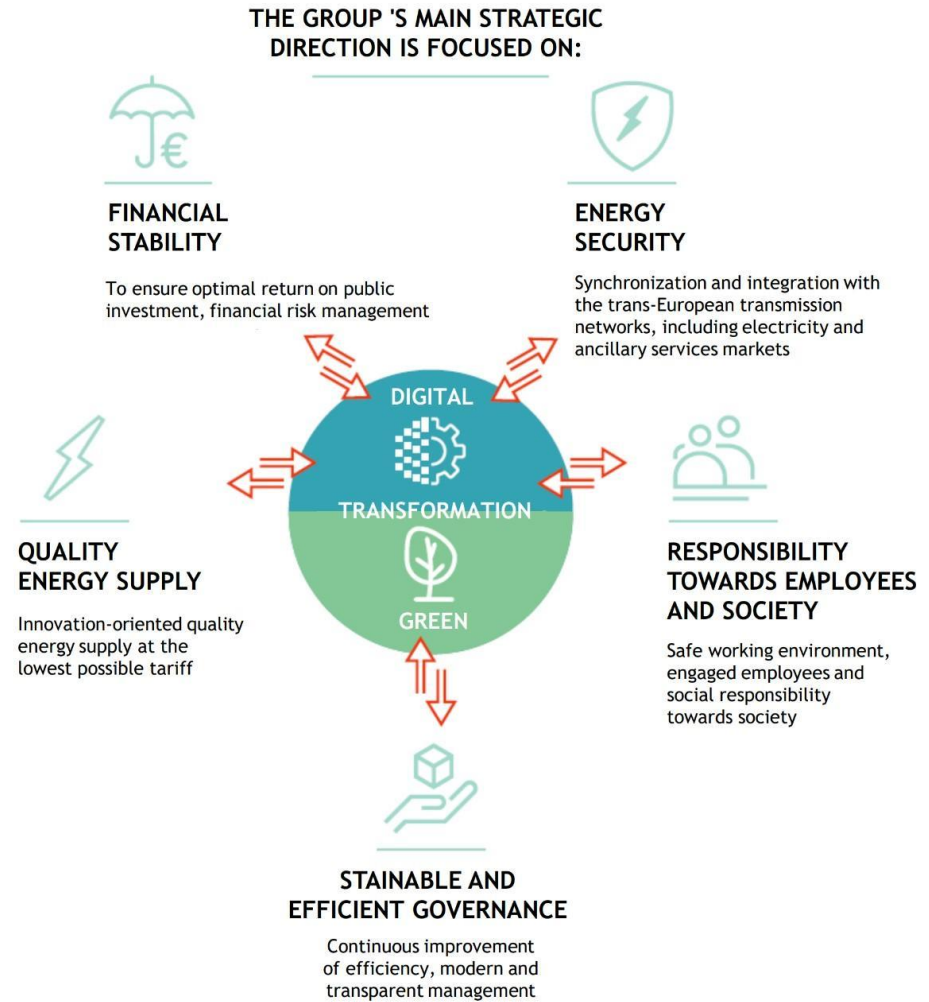

Values

TRUST	DEVELOPMENT	SAFETY	TEAM
			
HONESTLY	WISDOM	RESPONSIBLY	TOGETHER
Independent, ethical, and transparent action towards anyone and everyone	Effectively. Looking forward. Long-term thinking	Deliberate action. With high responsibility towards people, work, and nature	We join forces to achieve more. Strong team that encourages and challenges

Group strategy

In order to promote sustainable economic development, Latvia and the European Union have prioritised reducing environmental impact, limiting climate and environmental change, and digitalisation matters. These priorities follow the European Commission’s 2019 Communication (EC) on a Green Deal for Europe. The Green Deal focuses on the use of renewable energy sources and progress toward climate neutrality by 2050.

Based on the Group’s vision, Augstsprieguma Tīkls Group’s medium-term operating **strategy** for 2021-2025 (hereinafter also referred to as the “Strategy” was developed and approved in 2021. It defines the strategic direction of the Group and sets financial and non-financial goals for the Parent company and Conexus for the next five years. The goals set, projects already started and instructions for action also shape the future goals – heading towards a carbon-neutral economy within the framework of the European Green Deal, achievement of the goals set out in the Latvian National Energy and Climate Plan for 2021-2030.

AN OUTLINE OF THE OPERATING ENVIRONMENT AND FINANCIAL PERFORMANCE

During the reporting period, the net turnover of the Augstspriegums Tīkli Group amounted to EUR 351,128 thousand, while the net profit amounted to EUR 16,165 thousand. As compared to the same period in 2021, the Group's profit increased mainly due to the Public Utility Commission's approval of using the cumulative revenue from congestion charges to absorb the costs associated with the sharp rise in electricity prices.

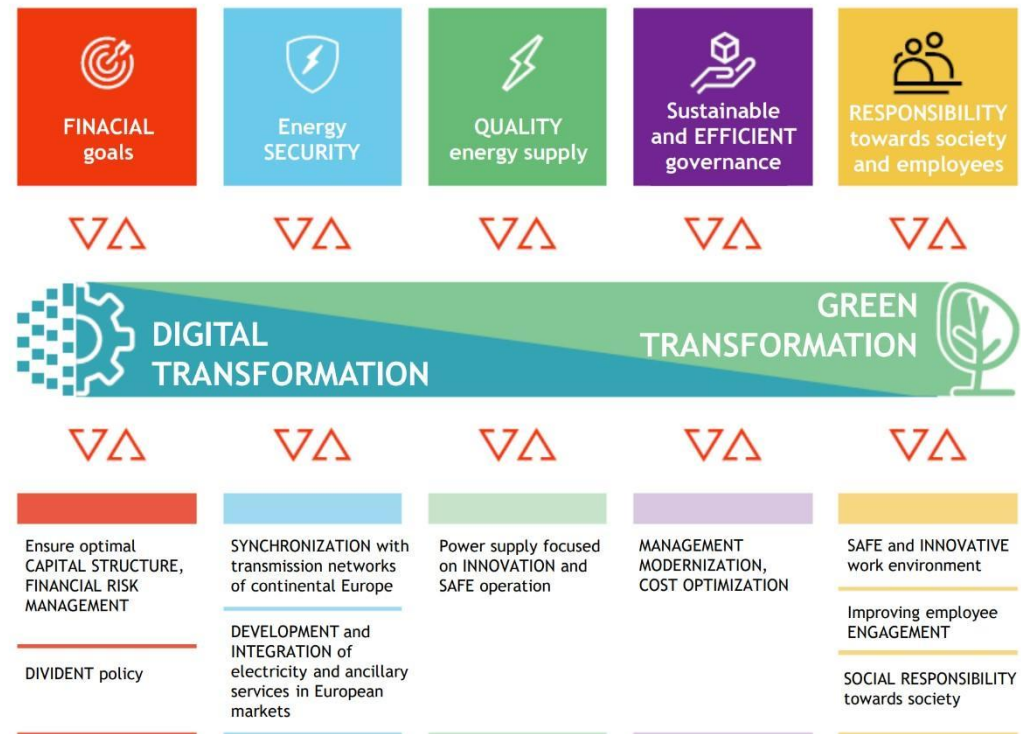

According to the current legislation, unbudgeted cost increases are carried forward to future periods. The decision on costs carried forward to future periods is made by the Public Utilities Commission Council.

Transmission of electricity

Under the issued license No. E12001 and Section 11, paragraph one of the Electricity Market Law, AS "Augstsprieguma tīkls" is the sole electricity transmission system operator in Latvia, and the territory of its license covers the entire territory of Latvia. AS "Augstsprieguma tīkls" ensures continuous, safe and sustainably efficient electricity transmission throughout Latvia. Under Section 5 of the Energy Law, electric transmission is a regulated sector.

The Parent Company considers all of its activities to fall into one business segment – electric power transmission. The following information relates both to the strategic objectives and sustainability aspects of the Parent Company and to the operating environment and financial performance of the segment.

The Group's medium-term operating strategy sets out the Parent Company's financial and non-financial objectives for the next five years:

The Parent Company has developed, implemented, and maintains the company's management system in accordance with the standards ISO 9001: 2015 (quality), ISO 14001: 2015 (environment), ISO 45001: 2018 (OHSAS 18001: 2007) (occupational safety) and ISO 50001: 2011 (energy management) requirements.

The implemented integrated management system ensures the efficient operation of AST in compliance with internationally agreed regulations for operational, quality, energy, environmental, occupational health, and safety management, correct compliance with the requirements of laws and regulations, promoting awareness of the business context of AST, viewing developments in the company through the prism of corporate risks and processes.

The strategic direction of the Parent Company is focused on sustainable development. The Company participates in the annual "Sustainability Index" organised by the Institute of Corporate Sustainability and Responsibility, and in 2022, it was awarded, for the fourth time, the high Platinum rating, which confirms compliance with the highest standards of corporate responsibility and concern for the well-being of its employees and customers.

Since 2017, in addition to AST's financial statements, a non-financial report, Sustainability Report, has been prepared in accordance with the Global Sustainability Reporting Guidelines, the Core Approach issued by the non-profit organization Global Reporting Initiative (GRI). The Sustainability Report addresses the Company's social responsibility, economic responsibility, responsibility towards society, employees and the working environment, environmental protection and other important aspects.

By introducing the most optimal techniques and technologies, reducing resource losses and waste, and reducing environmental pollutant emissions, climate change, and biodiversity impacts, the parent company's Environmental and Energy Management Policy aims to continuously improve the company's environmental and energy performance. The parent company systematically assesses and monitors the risk to the environment. To address significant risks, risk management measures or action programmes are identified. As part of the environmental monitoring and energy monitoring plans and processes, an environmental incident register is maintained, and key environmental performance indicators are periodically monitored. Risks associated with the environment are low, with environmental action programmes defined and risk management measures in place for key aspects.

The Parent Company provides electricity through a transmission grid that includes interconnected grids and facilities, including interconnectors with a voltage of 110 kilovolts or more, used for transmission to the respective distribution network or to consumers. During the reporting period, the obligations imposed on the transmission system operator were implemented through the following transmission system:

High voltage (kV)	Number of substations	Number of autotransformers and transformers	Installed capacity (MVA)	Overhead and cable PPAs (km)
330 kV	17	26	3,800	1,742
110 kV	123	245	5,157	3,860
Total	140	271	8,957	5,602

In 2022, electricity prices continued to rise in both Latvia and Europe, reaching new historic highs in each summer month. After peaking in August, when the average monthly electricity price reached EUR 467.75 per megawatt-hour (MWh), prices declined. The average electricity price in Latvia reached EUR 226.91/MWh in 2022, a 156% increase from 2021. The sharp price increase was caused by a number of factors due to the reactions triggered by Russia's invasion of Ukraine. Due to concerns about sufficient supplies of energy resources in the coming winter, gas prices in Europe rose dramatically in the summer months, gradually declining towards the end of the year. The price increase was also fuelled by the refusal of the Baltic States and Finland to import electricity from Russia and Belarus. The hot weather in Europe also contributed to the price increase, which increased energy consumption for cooling purposes and reduced the inflow of water into the reservoirs of the hydropower plants in Scandinavia.

In 2022, Latvia produced 4,794 gigawatt hours (GWh) of electricity, 14.5% less than the previous year, while Latvia's electricity consumption decreased by 3.7%, reaching 7,106 GWh per year. As consumption and – moreover – electricity generation decreased, electricity imports increased in 2022 - 2,311 GWh of electricity were purchased from neighbouring countries, 30.4% more than in 2021, so that 67.5% of Latvian consumption was covered by domestic generation (a decrease of 8.52 percentage points compared to 2021).

In 2022, electricity generation from renewable sources increased. There was a 1.3% increase in production at the Daugava hydropower plants, There was a 34.5% increase in wind energy, a 13.3% increase in small hydropower, and a 122% increase in solar energy. However, their contribution to Latvia's aggregate electricity generation balance remains modest, at 0.11%.

On the other hand, a decrease in production in fossil fuel-fired power plants can be observed - the amount of electricity produced in large CHP plants has decreased by 36.9%, and the contribution of small CHP plants continues the steady decline observed in the last six years with a decline of 67.5% in 2022, produced from biomass – 5.9% less, produced from biogas – 9.4% less.

Changes in the production structure are related to the high gas price, which led to the large CHP plants running at minimum capacity from March to August, as well as the connection of new wind and solar power plants to the grid.

In 2022, AS "Augstsprieguma tīkls" transferred 6,193 GWh of electricity to consumers in Latvia, 1% less than in the corresponding period last year (6,312 GWh).

When evaluating the segment's financial performance indicators and economic performance, it should be taken into account that electricity transmission is a regulated sector under Section 5 of the Energy Law;

Net revenues of the segment in the reporting period amounted to EUR 295,997 thousand, including revenues from electricity transmission network services of EUR 75,232 thousand. The 135 % year-on-year increase in revenues in 2022 was mainly due to revenues from the balancing electricity and congestion management at borders. These revenues are used to absorb the costs associated with balancing the system as well as managing congestion.

The segment's financial performance in the first nine months of 2022 continued to be adversely impacted by the increase in electricity prices. Following the sharp increase in the price of electricity from May 2021, the cost of providing electricity transmission services has increased significantly. As the current tariff for electricity transmission services, approved in November 2020, does not cover the increase in the said costs, permission was received from the Public Utilities Commission to use the accumulated congestion fee revenues in the amount of EUR 36,540 thousand to absorb losses. As a result of the use of congestion fee revenues, the performance of the electricity transmission segment was a profit of EUR 4,480 thousand.

Natural gas transmission segment and natural gas storage segment

Due to the Parent Company's shareholding in its subsidiary, the Latvian operator of the natural gas transmission and storage system AS "Conexus Baltic Grid", an important focus of the Group's activities is on the sustainable management of strategically important energy supply assets and their integration into the internal energy market of the European Union.

AS "Conexus Baltic Grid" is the unified operator of natural gas transmission and storage in Latvia and manages one of the most modern natural gas storage facilities in Europe – Inčukalns Underground Gas Storage (hereinafter - Inčukalns UGS Storage) – as well as the main natural gas transmission system connecting the Latvian natural gas market directly with Lithuania, Estonia and the north-western region of Russia.

Conexus provides natural gas transportation and storage services to its customers in accordance with the tariffs established by the Public Utilities Commission.

Based on the energy policy planning documents, the overall strategic goal of the Group, the following directions of Conexus' development have been established:

- Promotion of security of energy supply in Latvia and provision of high-quality and accessible energy transmission service;
- Ensuring sustainable management of Latvia's energy supply assets;
- Promoting the integration of Latvia's energy supply assets into the European Union's internal energy market.

Transmission of natural gas

AS "Conexus Baltic Grid" is the sole operator of natural gas transmission and storage in Latvia. It ensures the maintenance of the natural gas transmission system, its safe and uninterrupted operation, and interconnection with the transmission systems of other countries and enables traders to use the natural gas transmission system for natural gas trading.

The main natural gas transmission system is 1,190 km long and is directly connected with the natural gas transmission systems of Lithuania, Estonia, and Russia. It ensures the transportation of natural gas in regional gas pipelines on the territory of Latvia and in connections with the natural gas transmission networks of the neighbouring countries:

- The international gas pipelines have a diameter of 720 mm and an operating pressure between 28 and 40 bar;
- The diameter of regional gas pipelines is between 400 mm and 530 mm with an operating pressure of up to 30 bar;

- For the transmission of natural gas to the local distribution network in Latvia, 40 gas regulation stations are used. For the supply of natural gas to the Latvian consumers, all the consumption points on the territory of Latvia are combined into one point.

In the 2022, the total volume of transported gas reached 31,4 TWh, which is 20% less than in the corresponding period of the previous year. The volume of natural gas consumption for the needs of Latvian consumers reached 8,8 TWh, which is 30% less than a year earlier.

Revenues of the natural gas transmission segment in the reporting period amounted to EUR 26,260 thousand and EBITDA reached EUR 13,045 thousand, which accounted for 41% of Conexus' total EBITDA. Profit of the transportation segment reached EUR 2,562 thousand (69% less than a year earlier).

In 2022, revenues in the transmission segment were negatively impacted by lower supply as a result of the Russian invasion of Ukraine, the increase in natural gas prices, weather conditions, preparations for the 2022/2023 annual heating season, and a decrease in electricity production at the country's largest thermal power plants. As a result, total consumer demand for gas was lower than in the corresponding period of the previous year, which led to a shortfall in revenues of EUR 7,900 thousand for the use of the exit point for the needs of Latvian natural gas consumers.

Conexus' operations are regulated, and the regulatory reporting periods differ from the financial reporting year. According to the methodology for calculating tariffs for natural gas transmission services, during a tariff period, revenues and costs may differ from the allowed volumes, which will affect the tariff values in the upcoming tariff cycles. See detailed information in the subsidiary's financial statements.

The assets of the transmission segment at the end of the reporting period amounted to EUR 239 million. EUR. During the reporting period, investments amounting to EUR 5,452 thousand were made. The largest of these were:

- In the 2022, Conexus invested a total of EUR 1,3 million in several sub-projects under the project of common European interest "Improvement of the Latvian-Lithuanian Interconnector" (ELLI);
- Underground gas pipelines were repaired for EUR 890 thousand;
- Inčukalns UGS gas transmission pipeline was replaced in the amount of EUR 4,7 million (EUR 0,8 million in 2022).

Storage of natural gas

The natural gas storage segment provides the natural gas storage required for the heating season and other needs of the network users in the Inčukalns underground gas storage facility.

In 2021/2022, the volume of Inčukalns UGS capacity reservation products reached 18.9 TWh, down 12% from a year earlier. At the same time, the various types of capacity products reserved by market participants and their tariffs ensured an increase in revenues from capacity products by EUR 4,875 thousand compared to the previous year.

In the reporting period, sales in the natural gas storage segment amounted to EUR 28,871 thousand, and EBITDA reached EUR 19,170 thousand. The profit of the natural gas storage segment reached EUR 11,189 thousand. According to the methodology for calculating tariffs for the Natural Gas Storage System service, during the tariff period, revenue and cost deviations may occur against the permitted volumes, which will affect the tariff values in the upcoming tariff cycles. See detailed information in the subsidiary's financial statements.

The segment's assets at the end of the reporting period amounted to EUR 225 million. During the reporting period, investments were made in the amount of EUR 9,5 million, they are EUR 7,3 million less than a year earlier. The largest investments - reconstruction of wells and modernisation of the gas pumping equipment of the compressor shop No. 2, totaling EUR 7.2 million, were carried out as part of the ambitious project of common interest of the European Union PCI 8.2.4 "Enhancement of Inčukalns Underground Gas Storage".

FINANCIAL RISK MANAGEMENT

The financial risks of the Augstsprieguma tīkls Group are managed in accordance with the Financial Risk Management Policy and Financial Risk Management Regulations.

The Subsidiary of the Augstsprieguma tīkls Group develops and approves its own financial risk management policies, which are consistent with the general principles contained in the Group's policy.

The management of financial resources aims to ensure the financing and financial stability of economic activities through conservative financial risk management. As part of financial risk management, the Group and the parent company implement financial risk controls and take risk mitigation measures to reduce the risk of open positions.

a) Liquidity risk

Liquidity risk relates to the ability of the Group and the Parent Company to meet their obligations as they fall due. For unforeseeable cash flow fluctuations and short-term liquidity risks arising from operational risks, the Group and the Parent Company set aside a reserve in the form of cash or subscribed and irrevocably available loans for the next 24 months.

The Group and the Parent Company adhere to prudent liquidity risk management and ensure that they have sufficient financial resources to settle their liabilities when they fall due.

Management believes that there will be no liquidity problems and that the Augstsprieguma tīkls Group will be able to pay its liabilities to creditors when due. Management believes that AS "Augstsprieguma tīkls" will have sufficient cash resources for the Group so that its liquidity is not at risk.

b) Interest rate risk

Interest rate risk arises primarily from fixed-interest borrowings, with the risk that financing costs will increase significantly due to interest rate increases. To limit the risk, the Group's and Parent Company's financial risk management rules stipulate that the proportion of fixed-interest or limited-

rise interest rates in the loan portfolio may not be less than 35%. At the same time, the financial risk management rules provide those deviations from this indicator are permitted in the restructuring of liabilities assumed in the course of the reorganization of ownership of the transmission assets.

c) Credit risk

The financial assets that potentially expose the Group and the Parent Company to a certain degree of risk concentration are mainly cash and receivables from contracts with customers. Credit risk may be associated with counterparty risk and counterparty risk.

In the course of its business activities, the Group and the Parent Company cooperate with local and foreign financial institutions. Consequently, there is a risk of financial counterparties - in case of insolvency or suspension of business partners, the Group and the Parent Company may incur losses. In the case of attracted external financing, there is a risk until the loan is withdrawn and transferred to one of the Group's partner banks or the Parent Company.

Credit risk arising from the Group's and the Parent Company's balances in current accounts is managed in accordance with the Group's financial risk management policy and regulations, balancing the allocation of funds.

In accordance with the financial risk management policy, counterparties are accepted in cooperation with banks and financial institutions that have a minimum credit rating of at least investment grade, as determined by themselves or the Parent Company's international rating agency.

In the course of its business activities, the Group and the Parent Company cooperate with local and foreign companies. This gives rise to counterparty or receivables risk, i.e., in the event of insolvency or default of business partners, the Group or the Parent Company may incur losses. The Law on International and National Sanctions of the Republic of Latvia imposes financial and civil restrictions on companies on the sanctions list, including the freezing of funds. In view of this, cooperation with a sanctioned company exposes the Group or the Parent Company to the risk of default, legal and reputational risks.

Although the Group and the Parent Company have significant concentration risk with respect to a counterparty or a group of similar counterparties, this risk is considered limited as the main counterparty is the state-owned company Latvenergo and its subsidiaries – a group of companies with a high credit rating of Baa2 (investment grade rating) and a stable future outlook from Moody's.

Credit risk related to receivables is managed through monthly analysis of receivables in accordance with the risk management measures set out in the Financial Risk Management Regulation.

d) Management of capital risk

The shareholder of the Parent company is the Republic of Latvia in the person of the Ministry of Finance (100%). The purpose of capital risk management is to ensure the sustainable operation and development of the Group and the Parent Company, the financing required for the implementation of the development plan in the area of transmission assets, and the fulfilment of the restrictive conditions specified in the loan agreements. The restrictive

covenants set forth in the borrowing agreements have not been breached. To ensure compliance with the restrictive covenants set forth in the loan agreements, an equity ratio analysis is performed on a regular basis.

FINANCING AND LIQUIDITY

The Group finances its capital expenditure projects from the funds of its own as well as from the external long-term financing raised regularly and timely on the financial and capital markets. Timely budgeted borrowings are essential to ensure optimal risk management of loan refinancing and to repay the loan principal within the contracted term. In 2021, the Parent Company issued green bonds worth EUR 100 million (see also Note 14).

As at 31 December 2022, the total amount of borrowings of the Parent Company was EUR 100 367 thousand (at 31 December 2021 – EUR 99,966 thousand), which consisted of non-current borrowings from green bonds issued in 2021 (see also Note 14). To finance working capital, AS “Augstsprieguma tīkls” has an overdraft credit agreement with AS SEB banka in the amount of up to EUR 20,000 thousand until 18 June 2023. In addition, in order to ensure funds for the financing of working capital for the next 24 months, an overdraft agreement of up to EUR 10,000 thousand was signed with AS “Swedbank” on 9 December 2022. During the reporting period, AS “Augstsprieguma tīkls” did not receive any borrowings under the said *overdraft* agreements. At the end of the reporting period, 100% of the total long-term loans have a fixed loan interest rate (at 31 December: 100%).

The total borrowings of the Group as of 31 December 2022 amounted to EUR 182,734 thousand, of which EUR 100,367 thousand, loans from credit institutions of EUR 82,367 thousand. The natural gas operator AS "Conexus Baltic Grid" raises external financing on its own. In total, the bank lines of credit in the amount of EUR 65,000 thousand were available to the Subsidiary, which represents a substantial liquidity buffer. The maturity of the agreements of the available lines of credit of EUR 65,000 thousand exceeds one year. At the end of the reporting period, 71% of the Group's total non-current borrowings have a fixed interest rate (at 31 December 2021: 75%). The increase in interest rates in the financial market does not have a significant negative impact on the Group.

The international rating agency S&P Global Ratings (S&P) has rated and ranked the Latvian transmission system operator **AS “Augstsprieguma tīkls” long-term credit rating A-/Stable**. S&P has assigned the Group's subsidiary a long-term credit rating of BBB+ with a stable outlook for the first time.

REGULATORY ACTIVITIES – THE TRANSMISSION AND STORAGE SERVICE TARIFF

Transmission of electricity

Tariffs for electricity transmission services are set in accordance with the “Methodology for Calculating Tariffs for Electric Transmission Services approved by the PUC”.

Under the PUC Council Decision No. 153 of 26 November 2020, tariffs for electricity transmission services for the regulatory period from 1 January 2021 to 31 December 2022 have been approved. Information on tariffs for electricity transmission services can be found on the website of the Parent Company <https://www.ast.lv/lv/content/parvades-pakalpojumu-tarifs>.

The “Methodology for calculating electricity transmission system service tariffs” as well as the “Methodology for accounting and calculating capital costs” were approved by the decision of the PUC Council of 29 August 2022.

Key changes:

- more prompt recovery of the cost difference between the planned and actual costs in the tariff project;
- use of accumulated congestion charge revenues to reduce the tariff to recover operating costs;
- change in the rate of return on capital from real to nominal;
- results of asset revaluations made after 31 December 2021, will not be included in the regulated asset base.

Considering that the current regulatory period expires on 31 December 2022, as well as the sharp increase in electricity prices from May 2021, the Parent Company developed and in October 2022 submitted the draft electricity transmission system service tariffs to the PUC for approval. Detailed information is available on the Parent company's website <https://www.ast.lv/lv/events/augstsprieguma-tikls-iesniedzis-apstiprinasanai-sprk-jaunu-elektroenergijas-parvades-tarifu>.

Considering that high electricity prices and changes in consumption are associated with exceptional circumstances (the impact of the COVID-19 pandemic on economic activity, Russia's invasion of Ukraine, and its impact on energy resource prices), the need for exceptional mechanisms to limit tariff increases and strengthen regional competitiveness was considered.

The Decision of the Republic of Latvia Cabinet of 24 January 2023 advocates one-off exceptional measures to limit the increase in the electricity transmission tariff, including the main contemplated measures for electricity transmission, such as setting an electricity tariff cap, above which the costs will be compensated from the State budget, and diverting the accumulated revenues from congestion charges to tariff reduction.

To this end, it is proposed to develop a detailed project regarding electricity transmission service tariffs that will take effect on 1 July 2023.

In accordance with the Methodology for calculating electricity transmission tariffs, the fluctuations between budgeted and actual revenues and costs will be balanced out over the next regulatory period. On the other hand, according to paragraph 67 of the Methodology, the transmission system operator may ask the regulator for permission to use congestion revenues to cover the costs of electricity losses and the provision of technological processes in 2022. Under the above-mentioned permission granted by the PUC, congestion revenues amounting to EUR 36,540 thousand were directed to cover the costs of electricity transmission losses and to ensure the technological process in 2022.

Transmission and storage of natural gas

On 21 April 2022, the Energy Law was amended to provide for the establishment of energy supply security reserves, which are stored at Inčukalnaš UGS to ensure the continuous supply of natural gas. The energy supply security reserves will ensure that natural gas is available in sufficient quantities

in the country to prevent the occurrence of an energy crisis. The energy supply security reserves in 2023 are set at 1.8 TWh. AS "Latvenergo" organised the purchase and storage of the energy security reserves in Inčukalna PGK on behalf of the state and also ensured their injection into Inčukalna UGS.

On 1 September 2022, the new methodology for accounting and calculating capital costs came into force. The PUC unified and transposed the regulations regarding capital costs from the sectoral tariff methodologies into a single methodology. The methodology for accounting for and calculating the cost of capital provides for several changes related to regulated assets as well as depreciation accounting and the calculation of return on capital.

The PUC developed a new version of the methodology for calculating tariffs for gas transmission services and launched a public consultation in accordance with the European Commission Regulation establishing a network code for harmonised tariffs for gas transmission. The consultation was launched on 15 December 2022. The tariffs applicable in the coming regulatory period will be calculated and submitted according to the new methodology.

FUTURE DEVELOPMENT OF THE GROUP

Electricity transmission

Synchronisation of the Baltic States with Continental Europe

In the coming years, the greatest challenges are related to the synchronisation of the **Baltic States with continental Europe**.

On 22 May 2019, AST signed the *Agreement on the conditions of the future interconnection of electric power system of Baltic States and electric power system of continental Europe*. The annexes to the concluded agreement on interconnection with the Continental European electricity system set out the technical requirements to be met by Baltic TSOs before and after the start of the synchronization process. These requirements relate to changes in transmission system settings, investments in infrastructure development, as well as the obligation of TSOs to ensure a certain level of frequency conservation, frequency renewal reserves, and system inertia.

Synchronization of the Baltic States with continental Europe is planned for 2025 or earlier if necessary. **As a result** of synchronization, the Baltic electric power transmission system will become part of the European system, which will mean independence from the Russian unified (IPS / UPS) system and a more secure electric power supply.

Development of the electricity transmission network

The decision of the PUC Council of 20 October 2022 "On the development plan of the electricity transmission system" approved the development plan of the electricity transmission system developed by AST for the period from 2023 to 2032 (hereinafter also "Development plan").

The development plan is based on the strategic objective of AST, i.e., strengthening Latvia's energy security by synchronizing the Latvian electricity transmission network with the continental European network in accordance with the principles of security and cost-efficiency.

The approved development plan sets out the development of the transmission network and the necessary financial investments in transmission infrastructure for the next ten years and provides for investments in the development of the electricity transmission network in the amount of EUR 401 million. The approved development plan is available in detail at: <https://www.ast.lv/en/content/power-transmission-system-development-plan>.

To minimise the impact of planned investments on electricity transmission tariffs, AST successfully secured EU co-financing for the projects of common European interest included in the development plan and reallocated congestion charge revenues to fund them:

- Project "Synchronization of the Baltic Electricity Transmission System with the European Network, Phase 1" – attracted EU co-financing up to 75% of the eligible costs, i.e., EUR 57.7 million;
- Project "Synchronization of the Baltic Electricity Transmission System with the European Network, Phase 2" – attracted EU co-financing of 75% of the eligible costs, i.e., EUR 92.6 million.

Investments in the electricity transmission system financed from EU co-financing and congestion charge revenues are not included in the calculation of tariffs for electricity transmission system services.

System management and development of the electricity market

Implementing the European Union's policy for the internal electricity market, AS "Augstsprieguma tīkls" strategic direction is aimed at developing and integrating the electricity and ancillary services markets into the European markets.

In the coming years, it is planned to continue working on the development and improvement of the EU single internal next day and current day market. This will include new opportunities for the participants in the European Union's internal electricity market, including Latvian and Baltic market participants.

Projects are currently underway that will allow market participants to participate in the next-day and day-ahead markets in a 15-minute resolution and to operate in the current-day market with products that include energy and transmission capacity, similar to what is currently done in the next-day market.

It is also planned to continue the work on the establishment of the single European mFRR trading platform and the accession of the Baltic TSOs to this platform, which will allow the Baltic balancing service providers to participate in the common European reserve market.

In order to join the platform, changes need to be made to the way the common Baltic balancing model works. The most important of these is the switch to a 15-minute balancing market period, which will allow electricity market participants to plan their operations more accurately and control system imbalances more effectively.

Innovation and research

In order to ensure the development of the Company, the representatives of the company actively participate in the work of the Committee for Research, Development and Innovation of the European Organization of Transmission System Operators ENTSO-E. In doing so, they are aware of the essential role of innovation for successful operation.

Within the framework of the ENTSO Committee for Research, Development and Innovation, activities are carried out to modify the existing electrical systems with a view to achieving the objectives set by the European Union.

The innovation and research activities are focused on six directions:

- Modernisation;
- Reliability and stability;
- Flexibility;
- Economy and efficiency;
- Digitisation;
- Green transformation.

Transmission and storage of natural gas

Conexus will actively participate in the work on the Inčukalns UGS modernisation project, which, once implemented by 2025, should significantly improve the operational reliability of the technical infrastructure and equipment so that the storage facility can maintain its functionality even after a pressure increase in the Baltic transmission network.

Work will also continue on the Latvian-Lithuanian Gas Pipeline Transport Capacity Enhancement Project to promote market access to the Klaipėda LNG terminal, the Latvian Inčukalns UGS, and the Polish-Lithuanian Gas Interconnector. The Latvian-Lithuanian Gas Interconnector Improvement (ELLI) project envisages the implementation of various activities in both Latvia and Lithuania by the end of 2023, increasing the gas interconnection capacity between Latvia and Lithuania in both directions. On 1 November 2022, the gas transport capacity in the direction from Lithuania to Latvia was already increased by one-third.

On 1 May 2022, the Polish-Lithuanian Gas Pipeline Link (GIPL) was put into operation, ensuring gas flow in both directions. The new interconnector will integrate the Baltic and Finnish regional gas markets into the common European Union gas market. This offers network users the possibility to diversify their gas supply sources and has a positive impact on gas supply security.

The European gas transmission system operators - Conexus, "Gasgrid Finland" (Finland), "Elering" (Estonia), "Amber Grid" (Lithuania), "Gaz System Poland" (Poland), and "Ontras" (Germany) - have signed cooperation agreements to develop hydrogen infrastructure from Finland via Estonia, Latvia, Lithuania, and Poland to Germany in order to fulfil RePowerEU 2030 plans. The network operators have launched the Nordic-Baltic Hydrogen Corridor project, which will strengthen energy security in the region, reduce dependence on imported fossil energy and accelerate the path to decarbonisation in various energy sectors. The project will also contribute to the reduction of greenhouse gas emissions in the EU by replacing the current production and use of fossil energy resources in the industrial, transport, electricity, and heating sectors with a switch to renewable energy - green hydrogen.

Conexus has launched a development solution for biomethane injection into the gas transmission network to promote the development of renewable gases in Latvia and to provide biomethane producers with an unprecedented opportunity to inject biomethane into the gas transmission system without having to construct a separate direct connection. In 2022, Conexus organised a public consultation on the plan to create a regional biomethane injection point into the gas transmission network.

Together with the regional gas transmission system operators "Gasgrid Finland" (Finland), "Elering" (Estonia), and "Amber Grid" (Lithuania), Conexus will continue the research already started on the possibilities of introducing and transporting hydrogen in the gas transmission system. On the other hand, in the field of storage, research activities on the possibilities of hydrogen storage will be launched at Inčukalna UGS.

IMPACT FROM RUSSIAN WAR AGAINST UKRAINE ON THE OPERATIONS OF THE COMPANY AND THE GROUP

On 24 February 2022, escalated the military conflict between Russia and Ukraine. As a result of Russia's invasion of Ukraine, Russia and Belarus are subject to severe economic and political sanctions from the European Union, the United States, and other countries.

The management of the Group continuously performs the necessary activities to ensure the continuity of operations of both the electricity transmission system operator and the unified natural gas transmission and storage operator and the availability of the provided services. Considering that currently, the Latvian power system operates synchronously with Russia's unified (IPS/UPS) system, AS "Augstsprieguma tīkls" has assessed the possible risks related to Russia's military aggression against Ukraine. On 22 May 2019 AST has signed an Agreement on the conditions of the future interconnection of power system of Baltic states and power system of continental Europe. Synchronisation of the Baltic electricity power transmission system with the continental Europe is to be completed until 2025.

In the current situation, it is not possible to assess the level of risk of possible unplanned disconnection of the Baltic power systems from the Russian unified (IPS/UPS) system, however, AS "Augstsprieguma tīkls" together with the electricity transmission system operators of the Baltic States and Poland, has prepared for the operation of the Baltic electricity systems in the event of an emergency desynchronization. The urgent synchronisation of the Baltic energy systems with the continental European power system is expected to lead to an increase in energy supply costs, but given the uncertain and complex situation, it is currently not possible to assess the extent of the financial impact.

Also, due to Russian aggression in Ukraine, on 19 April 2022 the Government of Latvia agreed conceptually on the abandonment of natural gas from Russia. The Economic, Agricultural, Environmental and Regional Policy Commission of the Parliament of the Republic of Latvia directed amendments to the Energy Law, which stipulate that natural gas supplies from Russia are banned from January 1, 2023. In support of the amendments prepared by the commission, on 14 July 2022, the Parliament of the Republic of Latvia adopted amendments to the Energy Law, which set a ban on natural gas supplies from Russia starting from 1 January 2023.

Although these are significant changes in the Baltic and Finnish single natural gas market, it is not expected that the importance of the Subsidiary in the Latvian energy system, as well as the impact on its business continuity and financial stability, will decrease. Due to emergency market conditions indicating need to perform impairment assessment, such assessment was carried out as part of preparation of condensed interim financial statements for nine month of 2022. Potential impairment of assets was considered for non-current assets of AS "Augstsprieguma tīkls" (including investment into AS "Conexus Baltic Grid" as a subsidiary) and for non-current assets of AS "Conexus Baltic Grid" as part of consolidated group.

Management of AST has performed impairment assessment of AST non-current assets (excluding investment into AS "Conexus Baltic Grid" presented as part of AS "Augstsprieguma tīkls" balance sheet). As a result of this assessment, it was concluded that recoverable amount of assets exceeds their balance sheet value, moreover, the value of assets that are directly impacted by potential desynchronisation from Russia is immaterial in the context of financial statements (0.3% of total property, plant and equipment). AST management assumptions are based on the information available at the time of approval of the interim financial statement, and the impact of future events on the future performance of AST may differ from the current assessment.

Investment into AS "Conexus Baltic Grid" presented as part of AS "Augstsprieguma tīkls" balance sheet was assessed alongside with the value of non-current assets presented in the consolidated balance sheet of AS "Augstsprieguma tīkls", as purchase value of AS "Conexus Baltic Grid" historically was determined in respect of value of its property, plant, equipment and other non-current assets. Considering the changes in the geopolitical situation and the ban on natural gas supplies from Russian Federation as from 1 January 2023, as well as the increase of interest rates, Conexus management carried out an impairment assessment. As a result of testing performed, no impairment was recognised for non-current assets of AS "Conexus Baltic Grid", thus there is no need to recognise impairment of assets neither in separate nor in consolidated financial statements of AS "Augstsprieguma tīkls".

The Group provides strategically important public services. The Parent Company is a state-owned (100%) corporation and, in accordance with the Electricity Market Law, the only electricity transmission system operator in Latvia. Management believes that mitigating the impact of volatility in electricity markets and ensuring the security and stability of energy supply as a nationally important mission is supported by ensuring the long-term financial stability of the Group.

EVENTS AFTER THE END OF THE REPORTING PERIOD

During the government's Cabinet meeting held on 14 February 2023, the Ministry of Climate and Energy was designated as AS "Augstsprieguma tīkli" capital shareholder. This will promote the participation of the Ministry of Climate and Energy - the energy policy maker - in the development of the transmission system operators AS "Augstsprieguma tīkls" and AS "Conexus Baltic Grid". This participation is an essential prerequisite for energy security. Previously, the owner of the capital shares of AS "Augstsprieguma tīkls" was the Ministry of Finance. The change of the shareholder of AS "Augstsprieguma tīkls" does not affect the structure of the shareholders of the same. AST is 100% owned by the Republic of Latvia.

Since the last day of the reporting period there were no events or circumstances that could significantly affect the non-audited condensed financial statements of AS "Augstsprieguma tīkls" Group and AS "Augstsprieguma tīkls" for the 12 months period ended 31 December 2022. To mitigate cyber security risks, the Parent Company and its Subsidiary AS "Conexus Baltic Grid", as critical infrastructure companies, perform enhanced risk assessment and appropriate risk management. Although the uncertainty about the future impact of events on the Group's and the Parent Company's operations has increased, no circumstances have been identified that would threaten the continuity of operations and the performance of functions determined by law.

STATEMENT OF MANAGEMENT RESPONSIBILITY

STATEMENT OF MANAGEMENT RESPONSIBILITY

Based on the information available to the Board of AS “Augstsprieguma tīkls”, the consolidated and unaudited condensed interim financial statements of AS “Augstsprieguma tīkls” for the 12-month period ended 31 December 2022, which include a management report, have been prepared in accordance with International Financial Reporting Standards as adopted by the EU, and give a true and fair view of the financial position and performance of the Group and the parent company in all material respects. The information contained in the management report is true.

The consolidated AS “Augstsprieguma tīkls” and AS “Augstsprieguma tīkls” unaudited condensed interim financial statements for the 12-month period ended 31 december 2022 were approved by the Board of AS “Augstsprieguma tīkls” on 15 February 2023.

NOTES TO CONSOLIDATED AND STAND-ALONE FINANCIAL STATEMENTS

1. GENERAL INFORMATION ON THE GROUP

The principal business of the Augstsprieguma Tīkls Group is to provide electricity transmission system operator functions, efficiently manage power system assets, and transport and storage of natural gas.

The Augstsprieguma Tīkls Group comprises the Parent Company AS "Augstsprieguma tīkls", the subsidiary AS "Conexus Baltic Grid", the associated company "Baltic RCC" OÜ.

All shares of AS "Augstsprieguma tīkls" are owned by the State and held by the Ministry of Finance of the Republic of Latvia. The registered office of the Company is Darzciema iela 86, Riga, LV -1073, Latvia.

Board and Council of the Augstsprieguma Tīkls Group:

Members of the Board and their positions	Gunta Jēkabsone – Chairwoman of the Board (from 15.07.2021) Imants Zviedris – a member of the Board (from 02.01.2020) Gatis Junghāns – a member of the Board (from 25.04.2021) Mārcis Kauliņš – a member of the Board (until 17.09.2022) Arnis Daugulis – a member of the Board (from 15.07.2021) Varis Boks – Chairman of the Board (until 04.06.2021) Arnis Staltmanis – a member of the Board (until 01.05.2021)
Members of the Council and their positions	Kaspars Āboliņš – Chairman of the Council Olga Bogdanova – Deputy Chairwoman of the Board Armands Eberhards – a member of the Council Madara Melne – a member of the Council (until 08.02.2022) Aigars Ģērmanis – a member of the Council

AS "Augstsprieguma tīkls" is a transmission system operator which, in accordance with the licence No. E12001 issued by the Public Utilities Commission, ensures the security of operation of the transmission system and the supply of electricity to the Latvian electricity system, provides transmission service based on the published tariffs for transmission service, ensures the continuous availability of the services of the transmission system. AS "Augstsprieguma tīkls" carries out the day-to-day management of the transmission system and ensures a safe and stable transmission of electricity. The subsidiary of the Group, AS "Conexus Baltic Grid" is an independent operator of a unified natural gas transmission and storage system in Latvia, managing one of the most modern natural gas storage facilities in Europe - the Inčukalns underground natural gas storage facility - and the main natural gas transmission system connecting the Latvian natural gas market with Lithuania, Estonia, and Russia. Conexus takes care about the sustainability and safety of the infrastructure, the high quality of services that promotes the development of the market and brings economic benefits to customers and society as a whole. The transportation and storage of natural gas by Conexus are regulated by the Public Utilities Commission. The associated company of the group "Baltic RCC" OÜ is the Baltic Regional

Coordination Centre in Tallinn, charged with the main task of coordinating the planning of the development of electricity systems, as well as to coordinate the daily activities of individual operators to ensure the safety of electricity supply.

The financial statements were approved by the Board of the Company on 15 February 2023, as follows: Gunta Jēkabsons (Chairwoman of the Board), Imants Zviedris (a member of the Board), Gatis Junghāns (a member of the Board), and Arnis Daugulis (a member of the Board).

The auditor of the company is a commercial company of sworn auditors SIA "PricewaterhouseCoopers", and the responsible sworn auditor is Ilandra Lejiņa. These financial statements have not been audited.

2. SIGNIFICANT ACCOUNTING POLICIES

These consolidated financial statements of Augstsprieguma Tīkls Group and the condensed financial statements of AS "Augstsprieguma tīkls" have been prepared in accordance with International Financial Reporting Standards (IFRS) as adopted by the European Union, applying the same accounting policies or policies as used in the preparation of the consolidated statements of Augstsprieguma Tīkls Group and the financial statements of AS "Augstsprieguma tīkls" for 2021. These policies have been consistently applied to all the periods included, unless otherwise stated. Where necessary, prior period comparatives have been reclassified.

The Group's consolidated financial statements and the unaudited condensed financial statements of AS "Augstsprieguma tīkls" have been prepared under the historical cost convention, as modified, except for certain classes of property, plant and equipment that have been stated at revalued amounts, as disclosed in the accounting policies of the consolidated financial statements of the Augstsprieguma tīkls Group and the 2021 financial statements of AS "Augstsprieguma tīkls".

The unaudited condensed financial statements are presented in euros (EUR).

Non-IFRS EBITDA is presented in the income statement. Such presentation is common for the industry and enables a better comparability with other companies operating in this industry. For the purposes of these financial statements, EBITDA is calculated as earnings before interest, finance income, income taxes, dividends received, gains on investments in an associate, net gains on acquisitions, depreciation and amortisation. EBITDA may be calculated differently in the financial statements of other companies.

3. OPERATING SEGMENTS

The division into segments is based on the Group's internal organizational structure, which forms the basis for monitoring and controlling segment performance by the operating segment's decision-maker, the management of the Group company operating in each of the segments. The Parent Company's management board reviews the financial results of the operating segments.

Reportable segments are operating segments or groups of segments that meet certain criteria. An operating segment is a component of the Group that engages in operating activities from which it may earn revenues and incur expenses (including revenues and expenses relating to transactions with other components of the Group), the results of which are reviewed regularly by the chief operating decision-maker.

The profit monitored by the chief operating decision-maker is primarily EBITDA, but it also monitors operating profit. In the stand-alone financial statements, operating profit excludes income from dividends and interest income from subsidiaries.

The Group divides its operations into three segments - electricity transmission, natural gas storage and natural gas transmission. The Parent Company divides its operations into one main segment - electricity transmission. Geographically, the Group operates only on the territory of Latvia.

Transmission of electricity

The electricity transmission segment provides power transmission system services and maintains balance and stability in the transmission system.

The electricity transmission system consists of interconnected networks and facilities, including cross-border interconnections of 110 kV or more, used to transmit electricity from electricity generators to the respective distribution network or to end-users.

Transmission of natural gas

The natural gas transmission segment provides transportation of natural gas via high-pressure pipelines to supply the Inčukalns underground gas storage facility, other countries, and the distribution network.

The Company's advanced main natural gas transmission system is 1,190 km long and is directly connected to the natural gas transmission systems of Lithuania, Estonia and Russia. It enables both natural gas transportation through regional gas pipelines on the territory of Latvia and interconnections with the natural gas transportation systems of neighboring countries.

Storage of natural gas

The natural gas storage segment provides natural gas storage required for the heating season and other needs of system users in Inčukalns UGS.

The purpose of natural gas storage is to provide a continuous supply of natural gas to consumers, regardless of seasonal fluctuations in consumption, by storing natural gas in summer and withdrawing it in winter. Inčukalns UGS is the only functioning underground gas storage facility in the Baltic States and has ensured the stability of gas supply in the region since 1968.

In the table below there is information on the Group's segment revenues, financial results and earnings, as well as the assets and liabilities of the Group's operating segments and the parent company. Intersegment revenues are eliminated on consolidation and are reported in the "Adjustments and eliminations" column. All inter-segment transactions are conducted on the basis of regulated tariffs, if any, or at arm's length.

Segment information is provided for the Group only, as the Parent Company is considered as one operating segment - the electricity transmission segment.

Revaluation of PPEs is carried out with sufficient regularity to ensure that the carrying amount of PPE subject to revaluation does not differ materially from that which would be determined using fair value at the end of the reporting period. The Group's accounting policies require that the revaluation of PPE be performed on a regular basis, but at least every five years.

a) PPE in the electricity transmission segment

The following groups of PPEs in the electricity transmission segment, which are reported as power transmission lines and technological equipment, are revalued on a regular basis and at least every five years:

- Electricity transmission engineering structures;
- Transmission lines, technological equipment;
- Other electricity transmission equipment.

The revaluation of the above mentioned PPE groups was carried out in 2021 at their cost at 1 August 2021.

The valuation was conducted in accordance with real estate valuation standards and is based on the use of existing fixed assets, which is considered the best and most efficient use. As a result of the revaluation, the residual replacement value of each fixed asset was determined. The residual replacement value is the difference between the replacement cost of an asset or the replacement cost of an analogous asset at the time of valuation and the accumulated total physical, functional and economic depreciation.

Due to the specific nature and use of the assets, Level 3 data was used for the revaluation, which means that the data for the respective type of asset is not directly observable in the market.

The total fair value of the revalued assets was set at EUR 610,732,095. As a result of the revaluation, an increase in the value of PPE amounting to EUR 45,029,495 and a decrease amounting to EUR 14,163,011 were recognised. Of these amounts:

- EUR 4416,052 related to an increase in the value of assets for which a revaluation loss was previously recognised in the income statement, while EUR 8,312,289 related to a revaluation loss on assets with no revaluation reserve previously recognized. These amounts were recognised in the income statement.
- EUR 34,762,722 relates to the net gain on revaluation of property, plant and equipment recognized in comprehensive income and included in the revaluation reserve.

b) PPE in the natural gas transmission and natural gas storage segments

In accordance with the Group's accounting policies, revalued amounts are recognised for the following groups of property, plant and equipment in the natural gas transmission and natural gas storage segments: Buildings and structures related to natural gas transmission, transmission pipelines and related technical equipment.

The revaluation of fixed assets in the natural gas transmission and Storage segment was carried out in 2020. Due to the uniqueness and use of funds, Level 3 data was used for the revaluation, which means that the data for the respective type of assets are not easily observable in the market. In this revaluation (the previous one took place in 2016, when the assets were owned by AS "Latvijas Gāze") the data status of the assumptions used was not changed. The revaluation was performed by an external expert using the amortised replacement cost method. Under this method, the initial value of the assets is determined according to current prices and requirements and the materials used.

*Funding received from the European Union (related to assets) is recognised when the Group and the Parent Company have fulfilled the conditions attached to it and have an unconditional right to receive it. The conditions for receiving the funding are as follows: The Parent Company and the Group shall ensure the management, internal control, and accounting of the projects co-financed by the European Union in accordance with the European Union directives and

the legal requirements of the Republic of Latvia. Accounting records are kept in a separate account for each transaction related to the accounting of the projects co-financed by the EU. The Parent Company and the Group keep separate accounting records for the respective revenues, expenses, long-term investments, and VAT of the co-financed projects. If the funds have not been received by the end of the reporting period, they are recognized as receivables in the balance sheet item "Other receivables".

14. BORROWINGS

The Parent Company issued bonds in October 2021. The total amount of the bond issuance program is up to EUR 160,000 thousand with the possibility of additional issuances if needed. The bonds are listed on the Nasdaq Riga Stock Exchange and bear a fixed coupon of 0.5% per annum. They mature on 20 January 2027, and the Parent Company may repurchase any series of the issued bonds in full, but not in part, at any time within 3 (three) months prior to their maturity, at a price equal to the principal amount of the bonds together with accrued interest.

In addition to the events of default, a cross-default condition is applied if the outstanding debt of the Parent Company and its subsidiary, individually or in the aggregate, exceeds EUR 20,000 thousand.

To finance working capital, AS "Augstsprieguma tīkls" and AS "SEB banka" have concluded an *Overdraft agreement* up to EUR 20,000 thousand with a maturity date of 18 June 2023, a base interest rate of 3 months EURIBOR and an additional interest rate of 0.35%. In addition, in order to ensure funds for the financing of working capital for the next 24 months, an overdraft agreement of up to EUR 10,000 thousand was signed with AS "Swedbank" on 9 December 2022. The overdraft facilities are unsecured. During the reporting period, under this overdraft agreement, AS "Augstsprieguma tīkls" did not receive any borrowing.

The Subsidiary company of the Parent Company, natural gas operator AS "Conexus Baltic Grid", attracts external funding on its own. In the reporting year, AS "Conexus Baltic Grid" had borrowings from North Investment Bank, AS "SEB banka", and OP Latvian Bank plc Latvian branch. At the same time, the Subsidiary has lines of credit of EUR 65,000 thousand (at 31 December 2021: EUR 90,000 thousand), of which at the end of the reporting period a line of credit in the amount of EUR 929 thousand had been used. The terms of the available credit line agreements exceed one year.

At the end of the reporting period, the weighted average interest rate on the Parent Company's long-term borrowings remained unchanged at 0.5% (at 31 December 2021: 0.5%). 100% of the total long-term loans have a fixed loan interest rate (at 31 December : 100%).

At the end of the reporting period, the Group's weighted average interest rate on long-term loans is 0.52% (at 31 December 2021: 0.44%). 71% of the Group's total non-current borrowings have a fixed interest rate (at 31 December 2021: 75%).

All of the Group's loans are denominated in euros and are unsecured.

17. FAIR VALUE CONSIDERATIONS

IFRS 13 establishes a hierarchy of valuation techniques based on whether observable market data is used in the valuation technique or whether there is any observable market data. Observable market data is obtained from independent sources. If market data is not observable, the valuation technique reflects the Company's assumptions about the market situation.

This hierarchy requires the use of observable market data if it is available. When carrying out the revaluation, the Company shall consider the relevant observable market prices, if it is possible.

The objective of measuring the fair value, even if the market is not active, is to determine the transaction price at which market participants would be ready to sell the asset or make a commitment at a given valuation date under current market conditions.

Several methods are used to determine the fair value of a financial instrument: quoted prices or valuation techniques that incorporate observable market data and are based on internal models. Based on the fair value hierarchy, all valuation techniques are divided into Level 1, Level 2, and Level 3.

The level of the fair value hierarchy of a financial instrument should be determined as the lowest level if a significant part of its value consists of lower-level data.

The classification of a financial instrument in the fair value hierarchy is carried out in two steps:

1. Classify each level of data to determine the fair value hierarchy;
2. Classify the financial instrument itself on the basis of the lowest level if a significant part of their value is formed of lower-level data.

Quoted market prices - Level 1

The valuation technique in Level 1 uses unadjusted quoted prices in an active market for identical assets or liabilities when quoted prices are readily available and the price represents the actual market position for the transactions under fair competition.

Valuation techniques, when using market data – Level 2

In the valuation technique used in Level 2 models, all relevant data, directly or indirectly, is observable from the asset or liability side. The model uses market data that are not the quoted prices at Level 1 but that are observable directly (i.e., price) or indirectly (i.e., derived from price).

Valuation technique using market data that is not based on observable market data – Level 3

In the valuation technique, market data that are not based on observable market data (non-observable market data) are classified in Level 3. Non-observable market data are the data that are not easily available in an active market due to the illiquidity of the market or the complexity of the financial instrument. Level 3 data are usually determined from observable market data of a similar nature, from historical observations, or from analytical approaches.

Fair value of financial assets and liabilities and assets measured at fair value

The carrying amount of liquid and short-term (up to three months) financial instruments such as cash, short-term deposits, short-term trade receivables and debts to suppliers and contractors is approximately at their fair value.

The fair value of borrowings and lease liabilities is assessed by discounting future cash flows by applying market interest rates. As the interest rates applied to borrowings were determined recently and do not differ materially from market interest rates (although being fixed), while interest rates applied to lease liabilities are assessed as similar to current market interest rates, with the risk premium applied to the Group and the Parent Company not changed significantly, the fair value of non-current liabilities approximates their carrying amount.

Despite bonds (included under borrowings) being listed, market transactions are rare and cannot be considered representative of an active market. Thus Level 1 measurements are not applied to bonds issued. As a result, the fair value of bonds is determined by discounting future cash flows by applying market interest rates. As the interest rates applied to bonds were determined during 2021 and do not differ materially from market interest rates and the risk premium applied to the Group and the Parent Company has not changed significantly, the fair value of bonds approximates their carrying amount.

Management assessed that cash and short-term deposits, receivables, trade payables, bank overdrafts, and other current liabilities approximate their carrying amounts largely due to the short-term maturities of these instruments.

There has been no reclassification of assets between Level 1, Level 2 and Level 3 during the reporting period.

18. TRANSACTIONS WITH RELATED PARTIES

Related parties are State-owned enterprises that are controlled, jointly controlled or significantly influenced by the State.

Transactions in the ordinary course of business with the Latvian Government, including its departments and agencies, and transactions between state-controlled entities and public service providers are excluded from quantitative related party disclosures based on the provisions of paragraph 25 of IAS 24. The Group and the Parent Company enter into arm's length transactions with many of these entities.

The remuneration of management of the Augstsprieguma tīkls Group includes the remuneration of the members of the Board of the Group companies, the Council and the Council (Audit Committee) of the Parent Company. The remuneration for the management of the Parent Company includes the remuneration for the members of the Board of Management, the Council, and the supervisory body (audit committee) of the Parent Company.

19. EVENTS AFTER THE END OF THE REPORTING PERIOD

During the government's Cabinet meeting held on 14 February 2023, the Ministry of Climate and Energy was designated as AS "Augstsprieguma tīkli" capital shareholder. This will promote the participation of the Ministry of Climate and Energy - the energy policy maker - in the development of the transmission system operators AS "Augstsprieguma tīkli" and AS "Conexus Baltic Grid". This participation is an essential prerequisite for energy security. Previously, the owner of the capital shares of AS "Augstsprieguma tīkli" was the Ministry of Finance. The change of the shareholder of AS "Augstsprieguma tīkli" does not affect the structure of the shareholders of the same. AST is 100% owned by the Republic of Latvia.

Since the last day of the reporting period there were no events or circumstances that could significantly affect the non-audited condensed financial statements of AS "Augstsprieguma tīkli" Group and AS "Augstsprieguma tīkli" for the 12 months period ended 31 December 2022. To mitigate cyber security risks, the Parent Company and its Subsidiary AS "Conexus Baltic Grid", as critical infrastructure companies, perform enhanced risk assessment and appropriate risk management. Although the uncertainty about the future impact of events on the Group's and the Parent Company's operations has increased, no circumstances have been identified that would threaten the continuity of operations and the performance of functions determined by law.
